Kostenverdeling

Risico/prioriteëtmatrix

	0	1	2	3
Veiligheid Gezondheid	○	○	○	○
Gebruik en bedrijfsproces	○	○	○	○
Functionaliteit Kosten	○	○	○	○
Toename klachtenonderhoud	○	○	○	○
Esthetica Techniek	○	○	○	○
Energie	○	○	○	○

Risico/prioriteit
Het effect van het niet uitvoeren van gebreken wordt uitgedrukt in een driepuntsschaal.

0 = geen effect
1 = gering effect
2 = matig effect
3 = ernstig effect

Risico/prioriteiten zijn objectieve argumenten waarmee het belang van onderhoudsactiviteiten uitgedrukt wordt.

Voorbeelden hiervan zijn:
1) Veiligheid en Gezondheid voor de gebruikers (VG). Uitstel van dit soort activiteiten leidt of kan leiden tot gevaarlijke situaties voor de gebruikers.
2) Functionaliteit en kostenconsequenties (FK). Uitstel leidt tot verlies van functionaliteit en/of toename van vervolgshades.
3) Esthetica en techniek (ET). Uitstel leidt tot een gedaëterd aanzien.

Het onderlinge belang is via weëfactoren bepaald (zie scenario's in Objectinfo).

Methodology

Procedure

1) Qualifications of defects : Recording and checking of defects

a) Pre-defined: **Severity** of defect

- Slight defects (score = 1)
- Serious defects (score = 2)
- Major defects (score = 3)

© Arcadis 2016

Methodology

Procedure

b) **Intensity** of defect

- Initial stage (score = 1)
 - Barely noticeable (surface corrosion)
- Advanced stage (score = 2)
 - Clearly noticeable (ongoing corrosion)
- Final stage (score = 3)
 - Explicitly noticeable (flaking corrosion)

c) **Extent** of defect

Percentage of the total amount

Incidental	< 2%	(score 1)
Locally	2-10%	(score 2)
Frequent	10-30%	(score 3)
Significant	30-60%	(score 4)
General	> 60%	(score 5)

© Arcadis 2016

ARCADIS Design & Consultancy for natural and built assets

Methodology

Procedure

2) Condition scores
Combination severity, intensity and extent makes Condition score

Condition score

- 1 = excellent condition: no or very limited deterioration
- 2 = good condition: early stage of deterioration
- 3 = reasonable condition: initiation of deterioration process
- 4 = average condition: progressed deterioration, incidental danger
- 5 = bad condition: deterioration is irreversible
- 6 = very bad condition: maximal deterioration

© Arcadis 2016

3 - Eindstadium	1	1	2	3	4

© Arcadis 2016

Methodology

Effect Professional Monitoring Technical Maintenance

- Improved preventive maintenance
- Less curative maintenance
- Higher cost efficiency: maintenance, energy

© Arcadis 2016

Application & guidance client

Use of the report

- Condition of the property and investment schedule for the upcoming period 5 j, 10 j, 20 j.
- Condition of the operational reliability of the technical installation.
- Drawing up a budget for facility related purposes.
- Site approach cost efficiency management short and long term.
- Outsourcing of the maintenance part to a third party. Non core business. Building, techniques, infra a.o.
- Multi-Year Maintenance Plan (MYMP/MJOP) for 5 to 10 years schedule.

MJOP Approach

© Arcadis 2016

Application & guidance client

Appointment for the policy of the Multi-Year Maintenance Plan (MYMP), Multi-year maintenance needs, Multi-year budget.

Availability dataroom client.

Request for use of MYMP

With the MYMP a baseline measurement and a maintenance check can also be performed.

Possibility for merging reports.

Prior agreements are of major importance, most common for the preparation of an offer.

MJOP Approach

© Arcadis 2016

Inventarisation process

Most important part of the MYMP preparation.

Splitting casco part from techniques.

Determine detail of inventory.

Use of existing inventory.

Existing Excel files can be imported into software packages.

Is a part of the process in which previous made agreements are important and where modifications are difficult to implement afterwards.

When an inventory needs to be made, this will determine the largest part of the budget.

Tour on site

The tour on site is in function of controlling the legal certificates, 5 annual inspection reports of electricity, combustion reports, RA, Inspection of elevators a.o.

Guidance by the administrator or the person with the neccassairy knowledge, for exemple operating the installation parts, ventilation group, a.o. Supervisors are also aware of de locations of central heating rooms, substations a.o.

If the tour on site is done without guidance, it might be done based on floor plans, which will also be used to indicate important remarques.

Taking sufficiant pictures. It is also very important to report remarques during the tour on site.

Entering high and low tension rooms is only allowed by BA5 persons.

MJOP Approach

Report MJOP

Preparation by using customized software > in the current market situation, the most complete software is located at our northern neighbours.

All items are connected with NL FSB codes, budget determination and annually updated.

The NL Sfb codes for Belgium can be found in BB/Sfb, see following.

Dit Sfb systeem is een **coderingssysteem, specifiek voor de bouwsector**, dat zich leent tot enorm veel toepassingen, en ook **uitermate geschikt om de bouwelementen in Revit te ordenen** ... Zie de complete Sfb-documentatie voor meer info, ook **BB/Sfb-plus. Een functionele hiërarchie voor gebouwelementen**, door Frank De Troyer. Publicatie van 15 sept. 2008 ISBN 9789033471063, te bestellen [bij Standaard Boekhandel](#) (28€) of [via de NAV-webshop](#) (à 19.81€ voor NAV-leden) Dit boek is een uitbreiding van de publicatie: *BB/Sfb Tabellen 1990 – klasseersysteem voor de bouwsector* (nog te bestellen bij de [Regie der Gebouwen](#)).

Document drafted according the approved norm NEN 2767

MJOP Approach

© Arcadis 2016

Report MYMP

2 possibilities for input of data.

- Via PC (office job)
- Via Tablet (fieldwork) – time-saving

Report available with maintenance needs, planning and investments.
Adjustable according to the needs of the client.

This gives an idea on certain replacements, mostly Ad-Hoc
MYMP > clarity about budget & planning
Separate overview of building- and installation parts
Picture report of the observations

The installations are made at a certain level in approval with the client.

MJOP Approach

© Arcadis 2016

Report MYMP

Format to be delivered, PDF, overview of budgets, planning in Excel file.

[2016 05 26 - BUDGET.xlsx](#)

[Import export lijst MJOP.xlsx](#)

[Voorbeeld Exel planning.xlsx](#)

[Test 2016 01.pdf](#)

MJOP Approach

© Arcadis 2016

Report MJOP

Good overview of each persons tasks within the organisation

Overview of the costs 5 – 10 – 15 year

Possibility to integrate legal determinations

Possibility to spread certain costs, flexible period.

Inventory and planning can be used i.f.o. prestation contract.

Maintenance check to be carried out by a third party at an in advanced determined KPI
